Read before use

This document contains important technical and safety information about the device and its safety use and installation.

A CAUTION! Before beginning the installation, please read this guide and any other documents accompanying the device carefully and completely. Failure to follow the installation procedures could lead to malfunction, danger to your health and life, violation of the law or refusal of legal and/or commercial guarantee (if any). Alterco Robotics EOOD is not responsible for any loss or damage in case of incorrect installation or improper operation of this device due to failure to follow the user and safety instructions in this guide.

Introduction to Shelly devices

Shelly® is a line of innovative microprocessor-managed devices, which allow remote control of electrical appliances through a mobile phone, tablet, PC or home automation system. Shelly® devices can work standalone in a local WiFi network or they can also be operated through cloud home automation services. Shelly® devices will be accessed, controlled and monitored remotely from any place the user has internet connectivity, as long as the devices are connected to a WiFi router and the Internet. Shelly® devices have built-in web servers through which the user can adjust, control and monitor them. The cloud function can be used if it is activated through the web server of the device or the settings in the Shelly Cloud mobile application. The user can register and access Shelly Cloud using either Android or iOS mobile application, or with any internet browser at <https://my.shelly.cloud>.

• Press short any of the buttons to see the measured by the Device room temperature. The display will show the measured room temperature for 3 seconds.

• Press and hold one of the buttons for 3 seconds to display the current temperature with a dot at the last digit. Press the Up or the Down button to set new target temperature in the range of 5°C to 30°C. LD message on the display means that the value is fully closed, and H means that the valve is fully open.

Setting room temperature using the Shelly Cloud APP

The room temperature can also be monitored and controlled through the Shelly Cloud APP. Check the App Guide for more information.

Setting room temperature using the Device WebUI

• Access the Device by its IP address in your WiFi network.

• Use the red and the blue arrows to set new target temperature.

• When the Device receives the new target temperature, a dot will flash briefly on the display.

A IMPORTANT: If a weekly schedule is activated, the manually set target temperature will be overridden by the next scheduled one.

Scheduling

Shelly® TRV supports up to 5 pre-set profiles to control the temperature in the room on a weekly schedule. Up to 20 temperature changes can be added to each profile.

Setting Schedule using the Shelly Cloud APP

The scheduling can also be activated and set through the Shelly Cloud APP. Check the App Guide for more information.

Setting Schedule using the Device WebUI

• Access the Device by its IP address in your WiFi network.

• Click on **Weekly schedule** button.

• Select a profile from the dropdown. Select the **Disable** profile to disable the scheduling.

• Click on **EDIT CURRENT SCHEDULE** to add, remove or edit temperature changes.

• Change the profile name if desired by typing a new name and pressing the **RENAME** button.

• Click on the **SET A NEW TIME** button to add a temperature change time. Select a desired temperature, check the weekdays it applies to and click the **SAVE** button.

• Edit a scheduled temperature change by clicking the yellow pencil button, or delete it by clicking the red bin button.

Installation Instructions

A CAUTION! The product is intended for indoor use only.

A CAUTION! Protect the product from dirt and moisture.

A CAUTION! Do not use the product in a damp environment and avoid splashing water.

A CAUTION! Ensure that the radiator is turned off and has cooled down before beginning the Device installation.

Compatible valves

If you already have thermostatic radiator valves, which typically have a dial on top with numbers from 1 to 5, most probably, your radiators are compatible with Shelly® TRV. Check the list of compatible radiator valves by brand and model at <https://shelly.cloud/knowledge-base/devices/shelly-trv>.

Radiators with manual valves are not compatible with Shelly® TRV. Manual valves are typically small and discrete. They are standard when you have a separate thermostat in the room or a central thermostat.

If your radiator valves are not compatible you can use one of the adapters included in the box. (fig.2)

Remove the existing thermostatic radiator valve - (fig.3)

1. Turn the dial counter clockwise until the valve is fully open.
2. Unscrew the metal ring counter clockwise to remove the valve.

Install Shelly® TRV

1. Check if you need an adapter and, if necessary, mount the suitable one before installing Shelly® TRV. (fig.4)
2. Fasten the Shelly® TRV to the radiator valve by turning the metal ring clockwise. Do not fully tighten the ring.

3. Place the Device display in the correct position and then fully tighten the metal ring.

A CAUTION! Do not try to rotate the Device, if the metal ring is fully tightened. This can damage it.

Switch on the Device

Press briefly the Device **Reset** button. The screen will light up with the **EI** message and the motor inside will turn in both directions. This is the calibration process.

If the calibration process is successful, the screen will display **RF** and the Device is ready to be connected to your WiFi network.

If the calibration is not successful, **EI** message will be displayed. The reason is either the ring is not tightened enough or the Device is not properly mounted to the radiator.

Try tightening the ring or remove the Device and carefully mount it again. Press and holding for 3 seconds any of the **Up** and **Down** buttons. Then press **Down** button a couple of times. The Device will try to calibrate again.

A IMPORTANT: If the Device has not been added into your WiFi network in 3 minutes, it will switch off. Press briefly the Reset button to start it again.

If needed, the Device can be switched off manually by pressing briefly the **Reset** button while the Device is in AP mode.

Charge the device

Fully charge the Device before its first use for about 7 hours. Battery status is displayed while charging. The line, which indicates the battery level, is flashing while the device is charging. A dot is displayed next to the bottom line, when a charger is connected. If the battery level is not displayed, press briefly the **Reset** button.

• b1 <50%
• b2 50-75%
• b3 >90%

A IMPORTANT: The device heats up during charging, which prevents it from measuring the room temperature correctly.

A CAUTION! Use only charging adapters that comply with USB-C standard. Do not use the Device if the charging adapter or the charging cable are damaged.

A CAUTION! Do not use the Device if it has been damaged.

A CAUTION! Do not attempt to service or repair the Device yourself.

Device Status

To check the Device status press and hold for 5 seconds both **Up** and **Down** buttons. Use the **Up** or **Down** buttons to scroll through all the parameters:

- Mode:
 - RF Access point mode
 - SE Station mode
 - ED connected to a WiFi network
- Battery level:
 - b1 <50% (<10% if the dash is flashing)
 - b2 50-75%
 - b3 >90%
- Status:
 - ED No issues
 - EI Calibration problem
 - E2 Temperature sensor problem

Initial inclusion

The most convenient way to use your Shelly® devices is through the Shelly Cloud mobile application and Shelly Cloud service.

Download the Shelly Cloud mobile application for Android or iOS on fig.5. Instructions on how to connect your device to the Shelly Cloud and control it through the Shelly mobile application can be found in the enclosed App Guide.

Manually connecting to a WiFi network - fig.6

You can manage and control the Device through its embedded web interface too.

• Make sure Shelly® TRV is in AP mode. Open the Device WebUI at 192.168.33.1 in the created by the Device WiFi network.

• Click the **Internet & Security** button and then select **WIFI MODE - CLIENT**.

• Check the **Connect the Shelly device to an existing WiFi Network** check-

box, enter the WiFi network name and password, and press the **SAVE** button.

• Find your Device IP address in the WiFi network. You can use a simple tool to find Shelly devices in the local network: https://shelly.cloud/documents/device_finders/ShellyFinderWindows.zip (Windows) and https://shelly.cloud/documents/device_finders/ShellyFinderOSX.zip (Mac OSX).

A IMPORTANT: Enabling the Client mode will disable the Access Point mode. In case you need the Access Point mode again, press the **Reset** button for 5 seconds.

How to control room temperature

Setting room temperature using the buttons

Press shortly any of the buttons to see the measured by the Device room temperature. The display will show the measured room temperature for 3 seconds.

Press and hold one of the buttons for 3 seconds to display the current temperature with a dot at the last digit. Press the **Up** or the **Down** button to set new target temperature in the range of 5°C to 30°C. LD message on the display means that the valve is fully closed, and H means that the valve is fully open.

Setting room temperature using the Shelly Cloud APP

The room temperature can also be monitored and controlled through the Shelly Cloud APP. Check the App Guide for more information.

Control your home with your voice

Shelly® devices are compatible with Amazon Alexa and Google Home supported functionalities. Please see our step-by-step guide on <https://shelly.cloud/support/compatibility>.

Control your home with your voice

Shelly® TRV is an intelligent WiFi connected, self-regulating valve fitted to a hot water heating system radiator. It can control the temperature of a room by changing the flow of the hot water through the radiator. Shelly® TRV can maintain the room temperature according to a set weekly schedule. If needed, the temperature can be changed at any time by pressing the buttons on the device, or through your mobile phone, tablet, or PC. Shelly® TRV is powered by a built-in rechargeable battery. The battery can be recharged via a USB-C connector. Shelly® TRV is designed to work without recharging for 2 years, but this depends on the specific working conditions, such as how often it is necessary to adjust the hot water flow, WiFi signal strength and wireless network quality.

(fig.1)

Installation Instructions

A CAUTION! The product is intended for indoor use only.

A CAUTION! Protect the product from dirt and moisture.

A CAUTION! Do not use the product in a damp environment and avoid splashing water.

A CAUTION! Ensure that the radiator is turned off and has cooled down before beginning the Device installation.

Compatible valves

If you already have thermostatic radiator valves, which typically have a dial on top with numbers from 1 to 5, most probably, your radiators are compatible with Shelly® TRV.

Check the list of compatible radiator valves by brand and model at <https://shelly.cloud/knowledge-base/devices/shelly-trv>.

Radiators with manual valves are not compatible with Shelly® TRV.

Manual valves are typically small and discrete. They are standard when you have a separate thermostat in the room or a central thermostat.

If your radiator valves are not compatible you can use one of the adapters included in the box. (fig.2)

Remove the existing thermostatic radiator valve - (fig.3)

1. Turn the dial counter clockwise until the valve is fully open.

2. Unscrew the metal ring counter clockwise to remove the valve.

Install Shelly® TRV

1. Check if you need an adapter and, if necessary, mount the suitable one before installing Shelly® TRV. (fig.4)

2. Fasten the Shelly® TRV to the radiator valve by turning the metal ring clockwise. Do not fully tighten the ring.

3. Place the Device display in the correct position and then fully tighten the metal ring.

A CAUTION! Do not try to rotate the Device, if the metal ring is fully tightened. This can damage it.

Switch on the Device

Press briefly the Device **Reset** button. The screen will light up with the **EI** message and the motor inside will turn in both directions. This is the calibration process.

If the calibration process is successful, the screen will display **RF** and the Device is ready to be connected to your WiFi network.

If the calibration is not successful, **EI** message will be displayed. The reason is either the ring is not tightened enough or the Device is not properly mounted to the radiator.

Try tightening the ring or remove the Device and carefully mount it again. Press and holding for 3 seconds any of the **Up** and **Down** buttons. Then press **Down** button a couple of times. The Device will try to calibrate again.

A IMPORTANT: If the Device has not been added into your WiFi network in 3 minutes, it will switch off. Press briefly the Reset button to start it again.

If needed, the Device can be switched off manually by pressing briefly the **Reset** button while the Device is in AP mode.

Charge the device

Fully charge the Device before its first use for about 7 hours. Battery status is displayed while charging. The line, which indicates the battery level, is flashing while the device is charging. A dot is displayed next to the bottom line, when a charger is connected. If the battery level is not displayed, press briefly the **Reset** button.

• b1 <50%

• b2 50-75%

• b3 >90%

A IMPORTANT: The device heats up during charging, which prevents it from measuring the room temperature correctly.

A CAUTION! Use only charging adapters that comply with USB-C standard. Do not use the Device if the charging adapter or the charging cable are damaged.

A CAUTION! Do not use the Device if it has been damaged.

A CAUTION! Do not attempt to service or repair the Device yourself.

ES

GUÍA DE USO Y SEGURIDAD**Por favor, lea antes de usar**

Este documento contiene información técnica y de seguridad importante sobre el aparato, su uso y su instalación segura.

A - ATENCIÓN! Antes de comenzar la instalación, lea atentamente y por completo la documentación adjunta. El incumplimiento de los procedimientos recomendados puede provocar un mal funcionamiento, un peligro para su vida o una violación de la ley. Alterco Robotics no se hace responsable de cualquier pérdida o daño debido a una instalación o uso inadecuado de este dispositivo.

Resumen del producto

Shelly® es una línea de dispositivos innovadores controlados por microprocesador que permiten el control remoto de los electrodomésticos a través de un teléfono móvil, una tableta, un PC o un sistema domótico. Los dispositivos Shelly® pueden funcionar de forma autónoma en una red Wi-Fi local, o también pueden ser operados por servicios de automatización en el hogar o en el Cloud. Los dispositivos Shelly® se pueden manejar, controlar y supervisar a distancia desde cualquier lugar en el que el usuario disponga de una conexión a Internet, siempre que los dispositivos estén conectados a un router Wi-Fi y a Internet. Los dispositivos Shelly® disponen de servidores web integrados, así como la posibilidad de acceder a través del servidor web del Dispositivo o de las páginas de la aplicación móvil Shelly Cloud. El usuario puede registrarse y acceder a Shelly Cloud mediante la aplicación móvil Android o iOS, o con cualquier navegador web en https://my.shelly.cloud/.

Los dispositivos Shelly® tienen dos tipos de Wi-Fi - punto de acceso (AP) y modo cliente (CM). Para funcionar en modo cliente, debe haber un router Wi-Fi dentro del alcance del dispositivo. Los dispositivos pueden comunicarse directamente con otros dispositivos WiFi a través del protocolo HTTP. El fabricante puede proporcionar una API.

Para más información, visite

<https://shelly-api-docs.shelly.cloud/#shelly-family-overview>

Controla tu casa con tu voz

Los dispositivos Shelly® son compatibles con las funciones que admiten Amazon Echo y Google Home. Consulte nuestra guía paso a paso en:

<https://shelly.cloud/support/compatibility/>

Shelly® TRV (el Dispositivo) es una válvula autorreguladora inteligente conectada por Wi-Fi que se instala en un radiador del sistema de calefacción por agua caliente. Puede controlar la temperatura de una habitación variando el flujo de agua caliente a través del radiador. Shelly® TRV puede mantener la temperatura de la habitación según un programa semanal establecido. Si es necesario, la temperatura puede cambiarse en cualquier momento pulsando los botones del dispositivo, o a través de su teléfono móvil, tableta o PC. El Shelly® TRV funciona con una batería recargable integrada. La batería se puede cargar a través de un conector USB-C. Shelly® TRV está diseñado para funcionar sin recargar durante 2 años, pero esto depende de las condiciones de trabajo específicas, como la frecuencia con la que es necesario ajustar el flujo de agua caliente, la fuerza de la señal Wi-Fi y la calidad de la red inalámbrica. (Imagen 1)

Instrucciones de instalación

A - ATENCIÓN! El producto está destinado a ser utilizado únicamente en interiores.

A - ATENCIÓN! Proteja el producto de la suciedad y la humedad.

A - ATENCIÓN! No utilice el producto en un entorno húmedo y evite las salpicaduras de agua.

A - ATENCIÓN! Asegúrese de que el radiador está apagado y se ha enfriado antes de empezar a instalar el aparato.

Válvulas compatibles

Si tiene válvulas de radiador termostáticas, que suelen tener un dial en la parte superior con números del 1 al 5, es probable que sus radiadores sean compatibles con el Shelly® TRV. Ver la lista de válvulas de radiador compatibles por marca y modelo y el modelo en <https://shelly.cloud/knowledge-base/devices/shelly-trv/>.

Los radiadores con válvulas manuales no son compatibles con Shelly® TRV. Las válvulas manuales suelen ser pequeñas y discretas.

Son estándar cuando se tiene un termostato independiente en la habitación o un termostato central.

Si las válvulas de su radiador no son compatibles, puede utilizar uno de los adaptadores incluidos en la caja. (img.2)

Desmontar la válvula termostática del radiador existente - (Imagen 3)

1. Gire el dial en sentido contrario a las agujas del reloj hasta que la válvula esté completamente abierta.

2. Desenrosque el anillo metálico en sentido contrario a las agujas del reloj para retirar la válvula.

Instalación de la válvula Shelly® TRV

1. Compruebe si necesita un adaptador y, si es necesario, coloque el adecuado antes de instalar el Shelly® TRV. (Imagen 4)

2. Fije el Shelly® TRV a la válvula del radiador girando el anillo metálico en el sentido de las agujas del reloj. No apriete el anillo completamente.

3. Coloque la pantalla del dispositivo en la posición correcta y, a continuación, apriete completamente el anillo metálico.

A - ATENCIÓN! No intente girar el aparato si el anillo metálico está completamente apretado. Esto podría dañar el dispositivo.

Encendido del dispositivo

Pulse brevemente el botón de reinicio del dispositivo. La pantalla se iluminará con el **EL** y el motor interior girará en ambas direcciones. Este es el proceso de calibración.

Si el proceso de calibración es exitoso, la pantalla mostrará **RIP** y el dispositivo estará listo para ser conectado a su red Wi-Fi.

Si la calibración no se realiza correctamente, aparecerá el mensaje **E1**. Esto se debe a que el anillo no está lo suficientemente apretado o a que el dispositivo no está montado correctamente en el radiador.

Pruebe a apretar de nuevo el anillo o retire el dispositivo y vuelva a montarlo con cuidado. Mantenga pulsado uno de los botones **Arriba** y **Abajo** durante 3 segundos. A continuación, pulse varias veces el botón **Abajo**. El aparato intentará calibrarse de nuevo.

A - ATENCIÓN! Si el dispositivo no se ha añadido a su red Wi-Fi durante 3 minutos, se apagará. Pulse brevemente el botón de reinicio para volver a encenderlo.

Si es necesario, el dispositivo se puede apagar manualmente presionando brevemente el botón **Reset** mientras el dispositivo está en "modo AP".

Cargar el dispositivo

Cargue completamente el dispositivo antes de su primera uso durante aproximadamente 7 horas. El nivel de la batería se muestra durante la carga. La linea, que indica el nivel de batería, parpadeará cuando el dispositivo se está cargando. Se muestra un punto junto a la linea inferior cuando se conecta un cargador. Si no se muestra el nivel de batería, pulse brevemente el botón de reinicio.

• **b1** <50%
• **b2** : 50-75%
• **b3** >90%

A - ATENCIÓN! El aparato se calienta durante la carga, lo que le impide medir correctamente la temperatura ambiente.

A - ATENCIÓN! Utiliza solo adaptadores de carga que cumplen con el estándar USB-C. No utilice el dispositivo si el adaptador de carga o el cable de carga están dañados.

A - ATENCIÓN! No utilice el dispositivo si está dañado.

A - ATENCIÓN! No intente reparar el aparato usted mismo.

Estado del dispositivo

Para comprobar el estado del dispositivo, pulse los botones **Arriba** y **Abajo** durante 5 segundos. Utilice los botones **Arriba** y **Abajo** para desplazarse por todos los ajustes:

• Modo :
- **RP** Modo de punto de acceso
- **SE** Modo de la estación St
- **ED** conectado a una red Wi-Fi

• Nivel de batería :
- **b1** <50% (<10% si el guión es intermitente)
- **b2** : 50-75%
- **b3** >90%

• Estado :
- **ED** No hay problema
- **E1** Problema de calibración

- **E2** Problema del sensor de temperatura E2

Inclusión inicial

La forma más conveniente de utilizar sus dispositivos Shelly® es con la aplicación móvil Shelly Cloud y el servicio Shelly Cloud.
